

1. Place marinated chicken on grill plate.
2. Set oven to desired temperature and set the probe temperature to desired doneness of chicken.
3. Place the grill plate with the chicken inside the oven.
4. Place the probe in the largest part of the largest piece of chicken
5. Close the door and press start.

**Note:** The actual temperature of the chicken will be shown when the cooking process starts as in picture 5.

6. When the chicken reaches 165°, the alarm will sound and the chicken is done.

**Note:** Although the probe reads 165° on the chicken, you may still need to check the temperature of the other pieces.
